1. Introduction

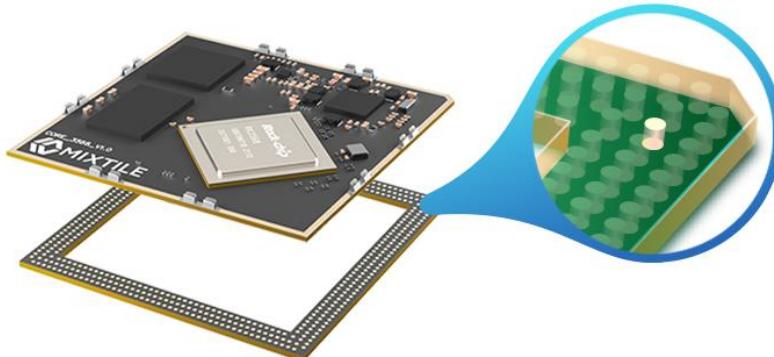

1.1 Product Description

Mixtile industrial-grade System-on-Module, Core 3568J, is designed for supporting multiple applications based on ARM high-performance and low-power processors. Please be noted that all pins of Mixtile Core 3568J are exactly same as Mixtile Core 3568.

The module is mainly composed of SoC RK3568J and LPDDR4, EMMC, plus PMIC. As the control unit of the entire system, it provides a basic hardware environment to run the entire system.

Optimized Board-to-Board Connecting Solution for System-on-Module

With extensive experience in designing system-on-modules, Mixtile innovated a special solution to keep costs low and maintain a small footprint while maximizing signal transmission rates of the SoM with its carrier board. Mixtile's optimized Board-to-Board connection intelligently saves space, reduces the transmission rate loss from the connector, and benefits from larger pins. The transmission rate for any connection is the main consideration, especially in system-on-modules, for maintaining a stable system. Mixtile's unique design enables high signal stability.
